

## Maths Calculation Policy: Division

The following pages show the *Power Maths White Rose Edition* progression in division and how this works in line with the National Curriculum. The consistent use of the CPA (concrete, pictorial, abstract) approach across *Power Maths White Rose Edition* helps children develop mastery across all the operations in an efficient and reliable way. This policy shows how these methods develop children's confidence in their understanding of both written and mental methods.

### RECEPTION

Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. Children record their calculations in their own ways, there is no expectation of number sentences at this stage; however children may choose this way to record their thinking.

**Key language:** , group, share, equal, equals, is equal to, groups, equal groups, divide, share, shared equally

#### **Division:**

Children first start to look at the idea of equal groups through their exploration of doubles. They use five frames and objects to check that groups are equal. Children then explore halving numbers by making two equal groups. They highlight patterns between doubling and halving seeing that double 2 is 4 and half of 4 is 2.

**As well as halving, children also explore sharing into more than two equal groups. They share objects one by one, ensuring that each group has an equal share..**

## KEY STAGE 1

Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10s and 1s to develop their calculation strategies, especially in addition.

**Key language:** group, share, equal, equals, is equal to, groups, equal groups, times, multiply, multiplied by, divide, share, shared equally, times-table

**Division:** Children develop an awareness of equal groups and link this with counting in equal steps, starting with 2s, 5s and 10s. In Year 2, they learn to connect the language of equal groups with the mathematical symbols for multiplication and division.

They learn how multiplication and division can be related to repeated addition and repeated subtraction to find the answer to the calculation. In this key stage, it is vital that children explore and experience a variety of strong images and manipulative representations of equal groups, including concrete experiences as well as abstract calculations.

Children begin to recall some key multiplication facts, including doubles, and an understanding of the 2, 5 and 10 times-tables and how they are related to counting.

## LOWER KEY STAGE 2

**Key language:** whole, part, equal groups, sharing, grouping, bar model

**Division:** Children build a solid grounding in times-tables, understanding the multiplication and division facts in tandem. As such, they should be as confident knowing that 35 divided by 7 is 5 as knowing that 5 times 7 is 35.

Children develop key skills to support multiplication methods: unitising, commutativity, and how to use partitioning effectively.

Unitising allows children to use known facts to multiply and divide multiples of 10 and 100 efficiently. Commutativity gives children flexibility in applying known facts to calculations and problem solving. An understanding of partitioning allows children to extend their skills to multiplying and dividing 2- and 3-digit numbers by a single digit.

Children develop column methods to support multiplications in these cases.

For successful division, children will need to make choices about how to partition. For example, to divide 423 by 3, it is effective to partition 423 into 300, 120 and 3, as these can be divided by 3 using known facts.

Children will also need to understand the concept of remainder, in terms of a given calculation and in terms of the context of the problem.

## UPPER KEY STAGE 2

**Key language:** factor, multiple, prime number, square number, cube number

**Division:** Building on their understanding, children develop methods to multiply up to 4-digit numbers by single-digit and 2-digit numbers.

Children develop column methods with an understanding of place value, and they continue to use the key skill of unitising to multiply and divide by 10, 100 and 1,000.

Written division methods are introduced and adapted for division by single-digit and 2-digit numbers and are understood alongside the area model and place value. In Year 6, children develop a secure understanding of how division is related to fractions.

Multiplication and division of decimals are also introduced and refined in Year 6.

Reception

Division

Real-life representation

Halving and sharing

Children explore halving and sharing through practical sharing using real life scenarios including sharing fruit or classroom equipment.

Half of 8 is 4.

Other representations

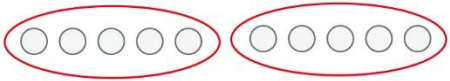

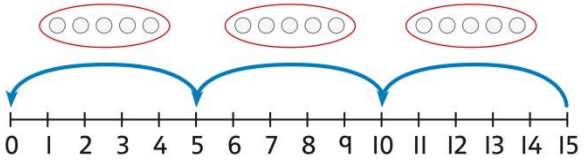

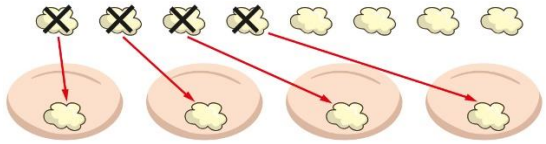

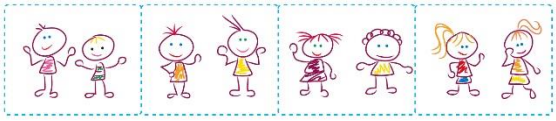

Halving and sharing

Children use five frames to share amounts fairly and to check that the groups are equal. They share the counters/cubes one by one.

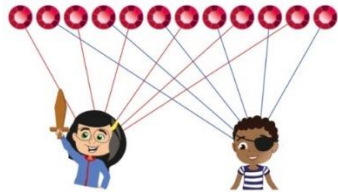

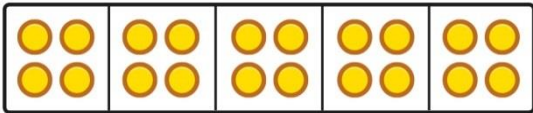

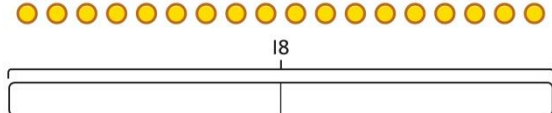

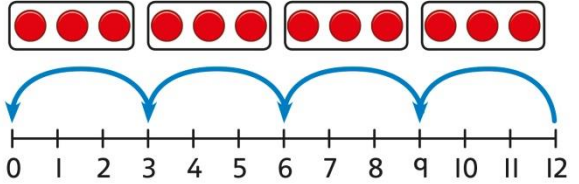

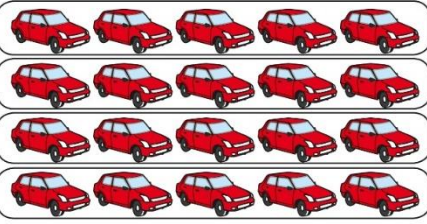

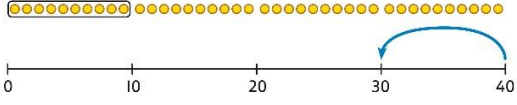

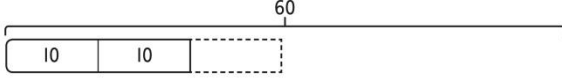

Half of 6 is 3.

Year 1

	Concrete	Pictorial	Abstract
<b>Year 1 Division</b>			
<b>Grouping</b>	<p>Learn to make equal groups from a whole and find how many equal groups of a certain size can be made.</p> <p>Sort a whole set people and objects into equal groups.</p>  <p><i>There are 10 children altogether. There are 2 in each group. There are 5 groups.</i></p>	<p>Represent a whole and work out how many equal groups.</p>  <p><i>There are 10 in total. There are 5 in each group. There are 2 groups.</i></p>	<p>Children may relate this to counting back in steps of 2, 5 or 10.</p> 
<b>Sharing</b>	<p>Share a set of objects into equal parts and work out how many are in each part.</p> 	<p>Sketch or draw to represent sharing into equal parts. This may be related to fractions.</p> 	<p><i>10 shared into 2 equal groups gives 5 in each group.</i></p>

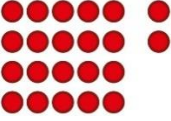

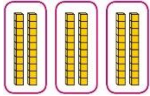

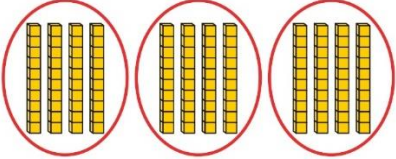

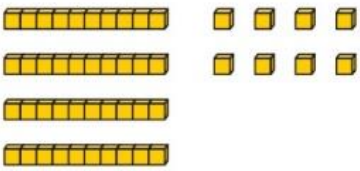

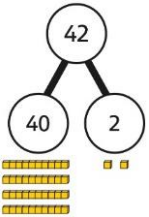

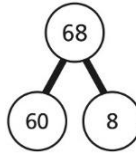

Year 2

	Concrete	Pictorial	Abstract
<b>Year 2 Division</b>			
<b>Sharing equally</b>	<p>Start with a whole and share into equal parts, one at a time.</p>  <p>12 shared equally between 2. They get 6 each.</p> <p>Start to understand how this also relates to grouping. To share equally between 3 people, take a group of 3 and give 1 to each person. Keep going until all the objects have been shared</p>   <p>They get 5  each.</p>	<p>Represent the objects shared into equal parts using a bar model.</p>  <p>20 shared into 5 equal parts. There are 4 in each part.</p>	<p>Use a bar model to support understanding of the division.</p>  <p>18 ÷ 2 = 9</p>

	<p>15 shared equally between 3. They get 5 each.</p>		
<p><b>Grouping equally</b></p>	<p>Understand how to make equal groups from a whole.</p>  <p>8 divided into 4 equal groups. There are 2 in each group.</p>	<p>Understand the relationship between grouping and the division statements.</p> <p><math>12 \div 3 = 4</math></p>  <p><math>12 \div 4 = 3</math></p>  <p><math>12 \div 6 = 2</math></p>  <p><math>12 \div 2 = 6</math></p> 	<p>Understand how to relate division by grouping to repeated subtraction.</p>  <p>There are 4 groups now.</p> <p>12 divided into groups of 3. <math>12 \div 3 = 4</math></p> <p>There are 4 groups.</p>
<p><b>Using known times-tables to solve divisions</b></p>	<p>Understand the relationship between multiplication facts and division.</p>  <p>4 groups of 5 cars is 20 cars in total. 20 divided by 4 is 5.</p>	<p>Link equal grouping with repeated subtraction and known times-table facts to support division.</p>  <p>40 divided by 4 is 10.</p> <p>Use a bar model to support understanding of the link between times-table knowledge and division.</p> 	<p>Relate times-table knowledge directly to division.</p> <p> <math>1 \times 10 = 10</math>  <math>2 \times 10 = 20</math>  <math>3 \times 10 = 30</math>  <math>4 \times 10 = 40</math>  <math>5 \times 10 = 50</math>  <math>6 \times 10 = 60</math>  <math>7 \times 10 = 70</math>  <math>8 \times 10 = 80</math> </p> <div style="border: 1px solid orange; border-radius: 15px; padding: 5px; display: inline-block;"> <p>I used the 10 times-table to help me. <math>3 \times 10 = 30</math>.</p> </div> <p>I know that 3 groups of 10 makes 30, so I know that 30 divided by 10 is 3.</p> <p><math>3 \times 10 = 30</math> so <math>30 \div 10 = 3</math></p>

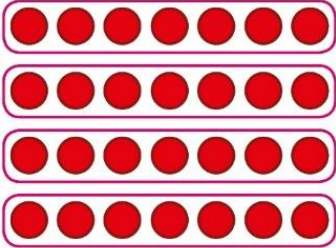

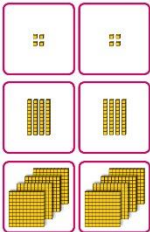

Year 3

	Concrete	Pictorial	Abstract
<b>Year 3 Division</b>			
<b>Using times-tables knowledge to divide</b>	<p>Use knowledge of known times-tables to calculate divisions.</p>  <p>24 divided into groups of 8. There are 3 groups of 8.</p>	<p>Use knowledge of known times-tables to calculate divisions.</p>  <p><math>48 \div 4 = 12</math></p> <p>48 divided into groups of 4. There are 12 groups.</p> <p><math>4 \times 12 = 48</math> <math>48 \div 4 = 12</math></p>	<p>Use knowledge of known times-tables to calculate divisions.</p> <p><i>I need to work out 30 shared between 5.</i></p> <p><i>I know that <math>6 \times 5 = 30</math> so I know that <math>30 \div 5 = 6</math>.</i></p> <p>A bar model may represent the relationship between sharing and grouping.</p>  <p><math>24 \div 4 = 6</math> <math>24 \div 6 = 4</math></p> <p>Children understand how division is related to both repeated subtraction and repeated addition.</p>  <p><math>24 \div 8 = 3</math></p>  <p><math>32 \div 8 = 4</math></p>

<p><b>Understanding remainders</b></p>	<p>Use equipment to understand that a remainder occurs when a set of objects cannot be divided equally any further.</p>  <p><i>There are 13 sticks in total. There are 3 groups of 4, with 1 remainder.</i></p>	<p>Use images to explain remainders.</p>  <p><math>22 \div 5 = 4 \text{ remainder } 2</math></p>	<p>Understand that the remainder is what cannot be shared equally from a set.</p> <p><math>22 \div 5 = ?</math></p> <p><math>3 \times 5 = 15</math>  <math>4 \times 5 = 20</math>  <math>5 \times 5 = 25 \dots \text{this is larger than } 22</math>      So, <math>22 \div 5 = 4 \text{ remainder } 2</math></p>
<p><b>Using known facts to divide multiples of 10</b></p>	<p>Use place value equipment to understand how to divide by unitising.</p> <p><i>Make 6 ones divided by 3.</i></p>  <p><i>Now make 6 tens divided by 3.</i></p>  <p>What is the same? What is different?</p>	<p>Divide multiples of 10 by unitising.</p>  <p><i>12 tens shared into 3 equal groups. 4 tens in each group.</i></p>	<p>Divide multiples of 10 by a single digit using known times-tables.</p> <p><math>180 \div 3 = ?</math></p> <p><i>180 is 18 tens. 18 divided by 3 is 6. 18 tens divided by 3 is 6 tens.</i></p> <p><math>18 \div 3 = 6</math>  <math>180 \div 3 = 60</math></p>
<p><b>2-digit number divided by 1-digit number, no remainders</b></p>	<p>Children explore dividing 2-digit numbers by using place value equipment.</p>  <p><math>48 \div 2 = ?</math></p> <p><i>First divide the 10s.</i></p>	<p>Children explore which partitions support particular divisions.</p>  <p><i>I need to partition 42 differently to divide by 3.</i></p>	<p>Children partition a number into 10s and 1s to divide where appropriate.</p>  <p><math>60 \div 2 = 30</math>  <math>8 \div 2 = 4</math></p> <p><math>68 \div 2 = 34</math>      Children partition flexibly to divide where appropriate.</p>

	  <p>Then divide the 1s.</p>  	 $42 = 30 + 12$ $42 \div 3 = 14$	$42 \div 3 = ?$ $42 = 40 + 2$ <i>I need to partition 42 differently to divide by 3.</i> $42 = 30 + 12$ $30 \div 3 = 10$ $12 \div 3 = 4$ $10 + 4 = 14$ $42 \div 3 = 14$
<b>2-digit number divided by 1-digit number, with remainders</b>	<p>Use place value equipment to understand the concept of remainder.</p> <p><i>Make 29 from place value equipment. Share it into 2 equal groups.</i></p>  <p><i>There are two groups of 14 and 1 remainder.</i></p>	<p>Use place value equipment to understand the concept of remainder in division.</p> $29 \div 2 = ?$  $29 \div 2 = 14 \text{ remainder } 1$	<p>Partition to divide, understanding the remainder in context.</p> <p><i>67 children try to make 5 equal lines.</i></p> $67 = 50 + 17$ $50 \div 5 = 10$ $17 \div 5 = 3 \text{ remainder } 2$ $67 \div 5 = 13 \text{ remainder } 2$ <p><i>There are 13 children in each line and 2 children left out.</i></p>

Year 4

	Concrete	Pictorial	Abstract
<b>Year 4 Division</b>			
<b>Understanding the relationship between multiplication and division, including times-tables</b>	<p>Use objects to explore families of multiplication and division facts.</p>  <p><math>4 \times 6 = 24</math>            24 is 6 groups of 4.            24 is 4 groups of 6.</p> <p>24 divided by 6 is 4.            24 divided by 4 is 6.</p>	<p>Represent divisions using an array.</p>  <p><math>28 \div 7 = 4</math></p>	<p>Understand families of related multiplication and division facts.</p> <p><i>I know that <math>5 \times 7 = 35</math></i></p> <p><i>so I know all these facts:</i></p> <p><math>5 \times 7 = 35</math>  <math>7 \times 5 = 35</math>  <math>35 = 5 \times 7</math>  <math>35 = 7 \times 5</math>  <math>35 \div 5 = 7</math>  <math>35 \div 7 = 5</math>  <math>7 = 35 \div 5</math>  <math>5 = 35 \div 7</math></p>
<b>Dividing multiples of 10 and 100 by a single digit</b>	<p>Use place value equipment to understand how to use unitising to divide.</p>  <p>8 ones divided into 2 equal groups            4 ones in each group</p> <p>8 tens divided into 2 equal groups            4 tens in each group</p> <p>8 hundreds divided into 2 equal groups            4 hundreds in each group</p>	<p>Represent divisions using place value equipment.</p> <p><math>9 \div 3 = \square</math></p>  <p><math>90 \div 3 = \square</math></p>  <p><math>900 \div 3 = \square</math></p>  <p><math>9 \div 3 = 3</math></p> <p>9 tens divided by 3 is 3 tens.            9 hundreds divided by 3 is 3 hundreds.</p>	<p>Use known facts to divide 10s and 100s by a single digit.</p> <p><math>15 \div 3 = 5</math></p> <p><math>150 \div 3 = 50</math></p> <p><math>1500 \div 3 = 500</math></p>

**Dividing 2-digit and 3-digit numbers by a single digit by partitioning into 100s, 10s and 1s**

Partition into 10s and 1s to divide where appropriate.

$39 \div 3 = ?$

$39 = 30 + 9$

$30 \div 3 = 10$

$9 \div 3 = 3$

$39 \div 3 = 13$

Partition into 100s, 10s and 1s using Base 10 equipment to divide where appropriate.

$39 \div 3 = ?$

$39 = 30 + 9$

$30 \div 3 = 10$

$9 \div 3 = 3$

$39 \div 3 = 13$

Partition into 100s, 10s and 1s using a part-whole model to divide where appropriate.

$142 \div 2 = ?$

$100 \div 2 = 50$

$40 \div 2 = 20$

$6 \div 2 = 3$

$50 + 20 + 3 = 73$

$142 \div 2 = 73$

**Dividing 2-digit and 3-digit numbers by a single digit, using flexible partitioning**

Use place value equipment to explore why different partitions are needed.

$42 \div 3 = ?$

*I will split it into 30 and 12, so that I can divide by 3 more easily.*

Represent how to partition flexibly where needed.

$84 \div 7 = ?$

*I will partition into 70 and 14 because I am dividing by 7.*

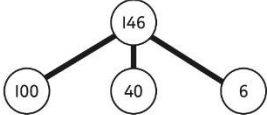

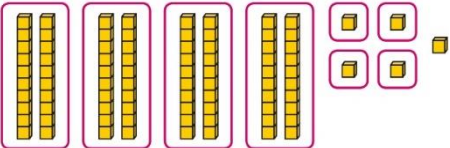

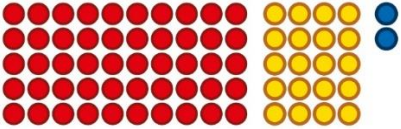

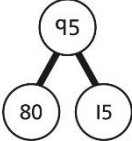

$84 \div 7 = 12$

Make decisions about appropriate partitioning based on the division required.

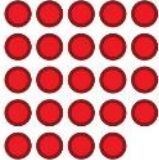

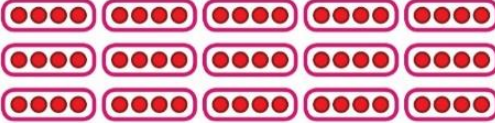

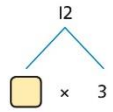

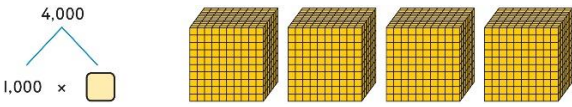

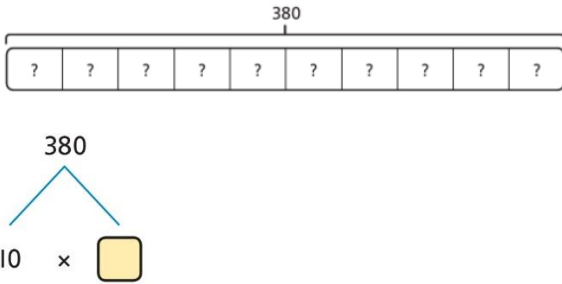

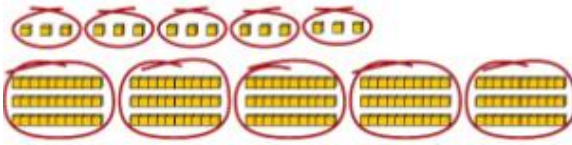

Understand that different partitions can be used to complete the same division.

<p><b>Divide by sharing</b></p>	<p>Share using place value equipment</p>	<p>Share by exchanging</p>	<p>Share using known facts and partitioning where appropriate</p> <p><math>142 \div 2 = ?</math></p>  <p><math>100 \div 2 = \square</math>   <math>40 \div 2 = \square</math>   <math>6 \div 2 = \square</math></p> <p><math>100 \div 2 = 50</math>  <math>40 \div 2 = 20</math>  <math>6 \div 2 = 3</math>  <math>50 + 20 + 3 = 73</math>  <math>142 \div 2 = 73</math></p>
<p><b>Understanding remainders</b></p>	<p>Use place value equipment to find remainders.</p> <p><i>85 shared into 4 equal groups</i></p> <p><i>There are 24, and 1 that cannot be shared.</i></p> 	<p>Represent the remainder as the part that cannot be shared equally.</p>  <p><math>72 \div 5 = 14</math> remainder 2</p>	<p>Understand how partitioning can reveal remainders of divisions.</p>  <p><math>80 \div 4 = 20</math>  <math>12 \div 4 = 3</math></p> <p><math>95 \div 4 = 23</math> remainder 3</p>

Year 5

	Concrete	Pictorial	Abstract
<b>Year 5 Division</b>			
<b>Understanding factors and prime numbers</b>	<p>Use equipment to explore the factors of a given number.</p>  <p><math>24 \div 3 = 8</math> <math>24 \div 8 = 3</math></p> <p><i>8 and 3 are factors of 24 because they divide 24 exactly.</i></p> <p><math>24 \div 5 = 4</math> remainder 4.</p>  <p>5 is not a factor of 24 because there is a remainder.</p>	<p>Understand that prime numbers are numbers with exactly two factors.</p> <p><math>13 \div 1 = 13</math> <math>13 \div 2 = 6 \text{ r } 1</math> <math>13 \div 4 = 4 \text{ r } 1</math></p>  <p><i>1 and 13 are the only factors of 13. 13 is a prime number.</i></p>	<p>Understand how to recognise prime and composite numbers.</p> <p><i>I know that 31 is a prime number because it can be divided by only 1 and itself without leaving a remainder.</i></p> <p><i>I know that 33 is not a prime number as it can be divided by 1, 3, 11 and 33.</i></p> <p><i>I know that 1 is not a prime number, as it has only 1 factor.</i></p>
<b>Understanding inverse operations and the link with multiplication, grouping and sharing</b>	<p>Use equipment to group and share and to explore the calculations that are present.</p> <p><i>I have 28 counters.</i></p> <p><i>I made 7 groups of 4. There are 28 in total.</i></p> <p><i>I have 28 in total. I shared them equally into 7 groups. There are 4 in each group.</i></p> <p><i>I have 28 in total. I made groups of 4. There are 7 equal groups.</i></p>	<p>Represent multiplicative relationships and explore the families of division facts.</p>  <p><math>60 \div 4 = 15</math> <math>60 \div 15 = 4</math></p>	<p>Represent the different multiplicative relationships to solve problems requiring inverse operations.</p> <p><math>12 \div 3 = \square</math> <math>12 \div \square = 3</math> <math>\square \times 3 = 12</math> <math>\square \div 3 = 12</math></p>  <p>Understand missing number problems for division calculations and know how to solve them using inverse operations.</p> <p><math>22 \div ? = 2</math> <math>22 \div 2 = ?</math></p>

<p><b>Dividing whole numbers by 10, 100 and 1,000</b></p>	<p>Use place value equipment to support unitising for division.</p> <p><math>4,000 \div 1,000</math></p>  <p><math>4,000</math> is 4 thousands.</p> <p><math>4 \times 1,000 = 4,000</math></p> <p>So, <math>4,000 \div 1,000 = 4</math></p>	<p>Use a bar model to support dividing by unitising.</p> <p><math>380 \div 10 = 38</math></p>  <p><math>380</math> is 38 tens.</p> <p><math>38 \times 10 = 380</math></p> <p><math>10 \times 38 = 380</math></p> <p>So, <math>380 \div 10 = 38</math></p>	<p><math>? \div 2 = 22</math>  <math>? \div 22 = 2</math></p> <p>Understand how and why the digits change on a place value grid when dividing by 10, 100 or 1,000.</p> <table border="1" data-bbox="1563 331 2123 430"> <thead> <tr> <th>Th</th> <th>H</th> <th>T</th> <th>O</th> </tr> </thead> <tbody> <tr> <td>3</td> <td>2</td> <td>0</td> <td>0</td> </tr> </tbody> </table> <p><math>3,200 \div 100 = ?</math></p> <p><math>3,200</math> is 3 thousands and 2 hundreds.</p> <p><math>200 \div 100 = 2</math></p> <p><math>3,000 \div 100 = 30</math></p> <p><math>3,200 \div 100 = 32</math></p> <p>So, the digits will move two places to the right.</p>	Th	H	T	O	3	2	0	0
Th	H	T	O								
3	2	0	0								
<p><b>Dividing by multiples of 10, 100 and 1,000</b></p>	<p>Use place value equipment to represent known facts and unitising.</p>  <p><math>15</math> ones put into groups of 3 ones. There are 5 groups.</p> <p><math>15 \div 3 = 5</math></p> <p><math>15</math> tens put into groups of 3 tens. There are 5 groups.</p> <p><math>150 \div 30 = 5</math></p>	<p>Represent related facts with place value equipment when dividing by unitising.</p>  <p><math>180</math> is 18 tens.</p> <p><math>18</math> tens divided into groups of 3 tens. There are 6 groups.</p> <p><math>180 \div 30 = 6</math></p>	<p>Reason from known facts, based on understanding of unitising. Use knowledge of the inverse relationship to check.</p> <p><math>3,000 \div 5 = 600</math></p> <p><math>3,000 \div 50 = 60</math></p> <p><math>3,000 \div 500 = 6</math></p> <p><math>5 \times 600 = 3,000</math></p> <p><math>50 \times 60 = 3,000</math></p> <p><math>500 \times 6 = 3,000</math></p>								

12 ones divided into groups of 4. There are 3 groups.

12 hundreds divided into groups of 4 hundreds. There are 3 groups.

$$1200 \div 400 = 3$$

**Dividing up to four digits by a single digit using short division**

Explore grouping using place value equipment.

$$268 \div 2 = ?$$

*There is 1 group of 2 hundreds.  
There are 3 groups of 2 tens.  
There are 4 groups of 2 ones.*

$$264 \div 2 = 134$$

Use place value equipment on a place value grid alongside short division. The model uses grouping. A sharing model can also be used, although the model would need adapting.

Lay out the problem as a short division.

*There is 1 group of 4 in 4 tens.  
There are 2 groups of 4 in 8 ones.*

Work with divisions that require exchange.

Use short division for up to 4-digit numbers divided by a single digit.

$$\begin{array}{r} 0556 \\ 7 \overline{) 3892} \end{array}$$

$$3,892 \div 7 = 556$$

Use multiplication to check.

$$556 \times 7 = ?$$

$$6 \times 7 = 42$$

$$50 \times 7 = 350$$

$$500 \times 7 = 3500$$

$$3,500 + 350 + 42 = 3,892$$

		<p>First, lay out the problem.</p> <p>How many groups of 4 go into 9 tens?</p> <p>2 groups of 4 tens with 1 ten left over.</p> <p>Exchange the 1 ten left over for 10 ones.</p> <p>We now have 12 ones.</p> <p>How many groups of 4 go into 12 ones?</p> <p>3 groups of 4 ones.</p>	
<p><b>Understanding remainders</b></p>	<p>Understand remainders using concrete versions of a problem.</p> <p><i>80 cakes divided into trays of 6.</i></p> <p><i>80 cakes in total. They make 13 groups of 6, with 2 remaining.</i></p>	<p>Use short division and understand remainders as the last remaining 1s.</p> <p>Lay out the problem as short division.</p> <p>How many groups of 6 go into 8 tens?</p> <p>There is 1 group of 6 tens.</p> <p>There are 2 tens remaining.</p> <p>How many groups of 6 go into 20 ones?</p> <p>There are 3 groups of 6 ones.</p> <p>There are 2 ones remaining.</p>	<p>In problem solving contexts, represent divisions including remainders with a bar model.</p> <p><math>683 = 136 \times 5 + 3</math>  <math>683 \div 5 = 136 \text{ r } 3</math></p>
<p><b>Dividing decimals by 10, 100 and 1,000</b></p>	<p>Understand division by 10 using exchange.</p> <p><i>2 ones are 20 tenths.</i></p> <p><i>20 tenths divided by 10 is 2 tenths.</i></p>	<p>Represent division using exchange on a place value grid.</p>	<p>Understand the movement of digits on a place value grid.</p> <p><math>0.85 \div 10 = 0.085</math></p>

1.5 is 1 one and 5 tenths.  
 This is equivalent to 10 tenths and 50 hundredths.  
 10 tenths divided by 10 is 1 tenth.  
 50 hundredths divided by 10 is 5 hundredths.  
 1.5 divided by 10 is 1 tenth and 5 hundredths.  
 $1.5 \div 10 = 0.15$

O	.	Tth	Hth	Thth
8	.	5		
0	.	0	8	5

$8.5 \div 100 = 0.085$

**Understanding the relationship between fractions and division**

Use sharing to explore the link between fractions and division.

1 whole shared between 3 people.  
 Each person receives one-third.

Use a bar model and other fraction representations to show the link between fractions and division.

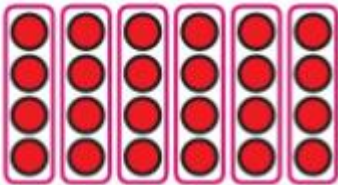

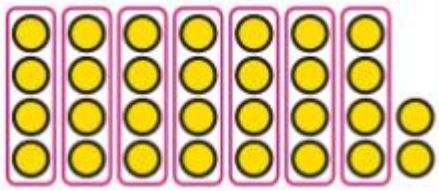

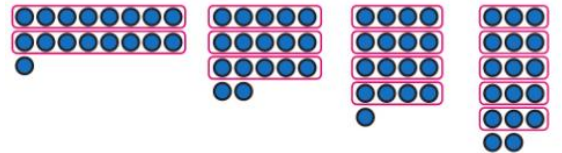

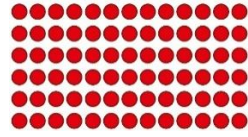

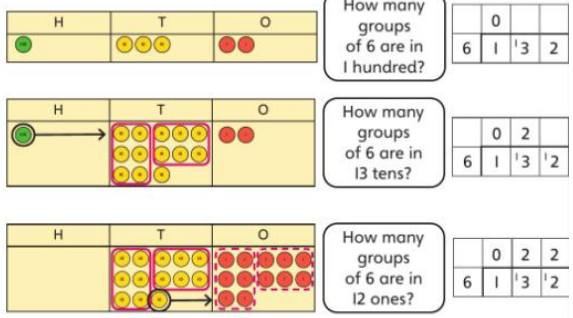

$1 \div 3 = \frac{1}{3}$

Use the link between division and fractions to calculate divisions.

$5 \div 4 = \frac{5}{4} = 1\frac{1}{4}$

$11 \div 4 = \frac{11}{4} = 2\frac{3}{4}$

Use an area model to link multiplication and division.

**Dividing by a 2-digit number using factors**

Understand that division by factors can be used when dividing by a number that is not prime.

Use factors and repeated division.

$1,260 \div 14 = ?$

$1,260 \div 2 = 630$

$630 \div 7 = 90$

$1,260 \div 14 = 90$

Use factors and repeated division where appropriate.

$2,100 \div 12 = ?$

**Dividing by a 2-digit number using long division**

Use equipment to build numbers from groups.

182 divided into groups of 13.  
There are 14 groups.

Use an area model alongside written division to model the process.

$$377 \div 13 = ?$$

$$377 \div 13 = 29$$

Use long division where factors are not useful (for example, when dividing by a 2-digit prime number). Write the required multiples to support the division process.

$$377 \div 13 = ?$$

		2	9	
13	3	7	7	
-	1	3	0	10
	2	4	7	
-	1	3	0	10
	1	7	7	
-	1	7	7	9
			0	

$$377 \div 13 = 29$$

A slightly different layout may be used, with the division completed above rather than at the side.

$$\begin{array}{r} 3 \\ 21 \overline{) 798} \\ - 630 \\ \hline 168 \end{array}$$

$$\begin{array}{r} 38 \\ 21 \overline{) 798} \\ - 630 \\ \hline 168 \\ - 168 \\ \hline 0 \end{array}$$

Divisions with a remainder explored in problem-solving contexts.

### Dividing by 10, 100 and 1,000

Use place value equipment to explore division as exchange.

Exchange each 0.1 for ten 0.01s.

Divide 20 counters by 10.

$0.2$  is 2 tenths.  
2 tenths is equivalent to 20 hundredths.  
20 hundredths divided by 10 is 2 hundredths.

Represent division to show the relationship with multiplication. Understand the effect of dividing by 10, 100 and 1,000 on the digits on a place value grid.

Understand how to divide using division by 10, 100 and 1,000.

$12 \div 10 = 1.2$        $1.2 \div 2 = 0.6$

Use knowledge of factors to divide by multiples of 10, 100 and 1,000.

$$40 \div 50 = \square$$

$$40 \rightarrow \boxed{\div 10} \rightarrow \boxed{\div 5} \rightarrow ?$$

$$40 \rightarrow \boxed{\div 5} \rightarrow \boxed{\div 10} \rightarrow ?$$

$$40 \div 5 = 8$$

$$8 \div 10 = 0.8$$

$$\text{So, } 40 \div 50 = 0.8$$

### Dividing decimals

Use place value equipment to explore division of decimals.

8 tenths divided into 4 groups. 2 tenths in each group.

Use a bar model to represent divisions.

$$4 \times 2 = 8 \qquad 8 \div 4 = 2$$

$$\text{So, } 4 \times 0.2 = 0.8 \qquad 0.8 \div 4 = 0.2$$

Use short division to divide decimals with up to 2 decimal places.

			$\begin{array}{r} \cdot \\ 8 \overline{) 4 \cdot 2 \ 4} \\ 0 \cdot \\ 8 \overline{) 4 \cdot 42 \ 4} \\ 0 \cdot 5 \\ 8 \overline{) 4 \cdot 42 \ 24} \\ 0 \cdot 5 \ 3 \\ 8 \overline{) 4 \cdot 42 \ 24} \end{array}$
